AUTO-TORQ sets the wheel end into optimum bearing adjustment for maximum wheel end life.

MAXIMIZES BEARING LIFE

By applying optimum clamp load on the bearings every-time, it reduces bearing wear which results in longer bearing service life.

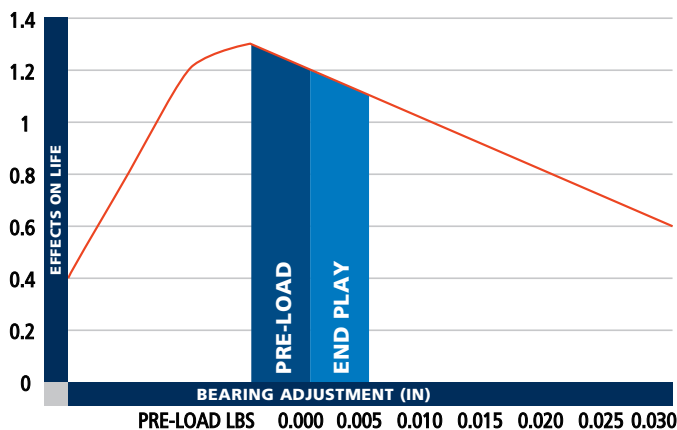

No need for spacers, half-stand bearings and precision hubs necessary for "PreSet" systems. Combine with STEMCO industry-leading seals, bearings & ESP hub caps for extended service life.

EASY OF INSTALLATION

Auto-Torq technology takes the guesswork out of axle fastener installation by eliminating complex processes and specialty tools.

This allows for quicker installation time with improved peace of mind that the installation is performed correctly.

Bearing Adjustment vs. Bearing Life

SAFE. SECURE. SIMPLE.
